

SEMICONTINUITY AND CLOSEDNESS PROPERTIES
OF RELATIONS IN RELATOR SPACES

CSABA RAKACKI and ÁRPÁD SZÁZ

Abstract. We extend some basic theorems on semicontinuity and closedness properties of set-valued functions of topological spaces to relations on relator (generalized uniform) spaces.

Moreover, in addition, we prove that a closed-valued and uniformly lower semicontinuous relation on a topologically semisymmetric relator space to a uniformly topologically transitive relator space is closed.

MSC 2000. 54C60, 54E15.

Key words. Generalized uniform spaces, semicontinuous and closed relations.
